Management's Discussion of Fund Performance

SUMMARY OF RESULTS

The Tradr 2X Long Innovation ETF (“TARK” or the “Fund”) seeks daily investment results, before fees and expenses, that correspond to two times (2x) the daily performance of the ARK Innovation ETF (the “Reference Asset”). The Fund invests in financial instruments that the Advisor believes, in combination, should produce daily returns consistent with the Fund’s investment objective.

For the fiscal year ending March 31, 2025, the Fund had a total return of -28.46% and an average daily statistical correlation of over 0.99 to two times that of the return of the Reference Asset after fees and the cost of leverage financing. For the same period, the Reference Asset had a total return of -4.99% and an annualized volatility of 38.77%.

The Reference Asset performance was driven by the performance of its ten largest companies (Tesla, Coinbase, etc.) which accounted for over 60% of the Reference Asset weight. Primary factors affecting Fund performance include the total return of the securities and derivatives held by the Fund, the performance of the assets to which any derivatives are linked, financing rates paid or earned, the types of derivative contracts used and their correlation to the Fund’s Index, expenses, transaction costs, the volatility of the Fund’s Reference Asset (and its impact on compounding), and other miscellaneous factors.
