

**FOR IMMEDIATE RELEASE**

## **Tradr Launches Leveraged ETFs on APP and QBTS**

*APPX and QBTX Offer 2X Daily Exposure to High-Growth Companies*

**NEW YORK, April 25, 2025** – [Tradr ETFs](#), a provider of ETFs designed for sophisticated investors and professional traders, today announced the launch of two new single stock leveraged ETFs: APPX and QBTX. These funds aim to deliver twice (200%) the daily performance of the common stock of innovative companies with exposure to advertising technology and quantum computing. The new ETFs include:

- **Tradr 2X Long APP Daily ETF (Nasdaq: [APPX](#))** – tracks AppLovin Corp. (APP)
- **Tradr 2X Long QBTS Daily ETF (Cboe: [QBTX](#))** – tracks D-Wave Quantum Systems, Inc. (QBTS)

Traders who are bullish on AppLovin or D-Wave can utilize Tradr ETFs' new funds to take advantage of swings in their daily stock price without using a margin account. The ETFs mark the first-ever leveraged products tied to the underlying stocks, further cementing Tradr's distinction as a pioneer in the single-stock ETF space. In 2022, Tradr ETFs became the first issuer to launch leveraged ETFs on single stocks, starting with TSLQ for Tesla and NVDS for Nvidia.

"Our goal is to provide traders with the sharpest tools available so they can capitalize on the exciting narratives represented by ad tech and quantum computing," said Matt Markiewicz, Head of Product and Capital Markets at Tradr ETFs. "Both of these underlying stocks offer a unique combination of volatility, liquidity and a compelling growth story. In today's fast-moving equity market, we believe high-conviction traders looking for transparency and simplicity will appreciate Tradr's distinctive leveraged ETFs."

APPX and QBTX can be accessed through brokerage accounts and allow investors to avoid the hassle of using margin and the complexity of options trading. With these launches, Tradr's lineup grows to nine leveraged ETFs. The firm continues its mission of providing sophisticated investors with innovative trading tools that enhance their ability to express market views with precision and efficiency.

### **About Tradr ETFs**

[Tradr ETFs](#) are designed for sophisticated investors and professional traders who are looking to express high conviction investment views. The strategies include leveraged and inverse ETFs that seek short or long exposure to actively traded stocks and ETFs.

### **IMPORTANT RISK INFORMATION**

Tradr ETFs are for sophisticated investors and professional traders with high conviction views and are very different from most other ETFs. The Funds are intended to be used as short-term trading vehicles and pursue leveraged investment objectives, which means they are riskier than alternatives that do not use leverage because

the Funds magnify the performance of their underlying security. The volatility of the underlying security may affect a Fund's return as much as, or more than, the return of the underlying security.

Investors in the fund should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking inverse and leveraged investment results; (c) for short ETFs, understand the risk of shorting; (d) intend to actively monitor and manage their investment. Fund performance will likely be significantly different than the benchmark over periods longer than the specified reset period and the performance may trend in the opposite direction than its benchmark over periods other than that period.

Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Funds, and may magnify any differences between the performance of the Funds and their reference security. The Funds seek leveraged investment results for a specific period (daily, monthly or quarterly). The exact exposure of an investment in the Fund intra-period will depend upon the movement of the reference security from the end of the prior period until the time of investment by the investor.

ETFs involve risk including possible loss of the full principal value. There is no assurance that the Fund will achieve its investment objective. Principal risks and other important risks may be found in the prospectus. Past performance does not guarantee future results.

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. There can be no guarantee that an active trading market for ETF shares will develop or be maintained, or that their listing will continue or remain unchanged. Buying or selling ETF shares on an exchange may require the payment of brokerage commissions and frequent trading may incur brokerage costs that detract significantly from investment returns.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting [www.tradretfs.com](http://www.tradretfs.com). The Prospectus should be read carefully before investing.
