

FOR IMMEDIATE RELEASE

Tradr Prepares Five Leveraged Single-Stock ETF Launches

First-to-market ETFs on CoreWeave, AST SpaceMobile, Constellation Energy, GE Vernova & NuScale Power

NEW YORK, July 9, 2025 – [Tradr ETFs](#), a provider of ETFs designed for sophisticated investors and professional traders, announced today that it expects to launch five first-to-market leveraged single-stock ETFs on CoreWeave (Nasdaq: CRWV), AST SpaceMobile Inc. (Nasdaq: ASTS), Constellation Energy Corp. (Nasdaq: CEG), GE Vernova Inc. (NYSE: GEV) and NuScale Power Corp. (NYSE: SMR) on Friday, July 11. This launch will grow Tradr's single-stock leveraged ETF lineup to 14 funds.

The five new funds are:

- Tradr 2X Long CRWV Daily ETF (Cboe: CWVX)
- Tradr 2X Long ASTS Daily ETF (Cboe: ASTX)
- Tradr 2X Long CEG Daily ETF (Cboe: CEGX)
- Tradr 2X Long GEV Daily ETF (Cboe: GEVX)
- Tradr 2X Long SMR Daily ETF (Cboe: SMU)

"These five new ETFs are tied to some of the most exciting narratives in the market today," said Matt Markiewicz, Tradr's Head of Product and Capital Markets. "Specifically, the AI data center build out theme is front and center with investors and, with this upcoming launch, we are putting traders smack in the middle of the story with four industry-first leveraged strategies."

Since late-April, Tradr ETFs has rolled out seven 2X long leveraged ETFs on other compelling single stocks, including Tempus AI ([TEMT](#)), AppLovin ([APPX](#)), D-Wave Quantum ([QBTX](#)), Archer Aviation ([ARCX](#)), Upstart Holdings ([UPSX](#)), Rigetti Computing ([RGTU](#)) and Quantum Computing ([QUBX](#)). As of July 8, 2025, the collective assets under management of those seven launches stands at over \$140 million.

About Tradr ETFs

[Tradr ETFs](#) are designed for sophisticated investors and professional traders who are looking to express high conviction investment views. The strategies include leveraged and inverse ETFs that seek short or long exposure to actively traded stocks and ETFs.

IMPORTANT RISK INFORMATION

Tradr ETFs are for sophisticated investors and professional traders with high conviction views and are very different from most other ETFs. The Funds are intended to be used as short-term trading vehicles and pursue leveraged investment objectives, which means they are riskier than alternatives that do not use leverage because the Funds magnify the performance of their underlying security. The volatility of the underlying security may affect a Fund's return as much as, or more than, the return of the underlying security.

Investors in the fund should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking inverse and leveraged investment results; (c) for short ETFs, understand the risk of shorting; (d) intend to actively monitor and manage their investment. Fund performance will likely be significantly different than the benchmark over periods longer than the specified reset period and the performance may trend in the opposite direction than its benchmark over periods other than that period.

Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Funds, and may magnify any differences between the performance of the Funds and their reference security. The Funds seek leveraged investment results for a specific period (daily, monthly or quarterly). The exact exposure of an investment in the Fund intra-period will depend upon the movement of the reference security from the end of the prior period until the time of investment by the investor.

The Fund will not attempt to position its portfolio to ensure it does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, investors in a Fund that seeks two times daily performance would lose all of their money if the Fund's underlying security moves more than 50% in a direction adverse to the Fund on a given trading day.

ETFs involve risk including possible loss of the full principal value. There is no assurance that the Fund will achieve its investment objective. Principal risks and other important risks may be found in the prospectus. Past performance does not guarantee future results.

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. There can be no guarantee that an active trading market for ETF shares will develop or be maintained, or that their listing will continue or remain unchanged. Buying or selling ETF shares on an exchange may require the payment of brokerage commissions and frequent trading may incur brokerage costs that detract significantly from investment returns.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting www.tradretfs.com. The Prospectus should be read carefully before investing.
