

FOR IMMEDIATE RELEASE

Tradr Launches First-to-Market Leveraged ETFs on CoreWeave, AST SpaceMobile, Constellation Energy, GE Vernova and NuScale Power

All five ETFs represent 2X long single-stock strategies focused on highly liquid growth names

NEW YORK, July 11, 2025 – **Tradr ETFs**, a provider of ETFs designed for sophisticated investors and professional traders, today announced the launch of five new single-stock leveraged ETFs. All five funds are first-to-market strategies that aim to deliver twice (200%) the daily performance of a specific underlying stock.

The new Tradr ETFs are listed on Cboe and include:

- **Tradr 2X Long CRWV Daily ETF (Cboe: CWVX)** – tracks CoreWeave Inc. (Nasdaq: CRWV)
- **Tradr 2X Long ASTS Daily ETF (Cboe: ASTX)** – tracks AST SpaceMobile Inc. (Nasdaq: ASTS)
- **Tradr 2X Long CEG Daily ETF (Cboe: CEGX)** – tracks Constellation Energy Corp. (Nasdaq: CEG)
- **Tradr 2X Long GEV Daily ETF (Cboe: GEVX)** – tracks GE Vernova Inc. (NYSE: GEV)
- **Tradr 2X Long SMR Daily ETF (Cboe: SMU)** – tracks NuScale Power Corp. (NYSE: SMR)

"We couldn't be more excited about the reception of our most recent seven single-stock ETFs," said Matt Markiewicz, Head of Product and Capital Markets at Tradr ETFs. "With well over \$140 million in assets amassed since we began launching them in late April, these funds have been enthusiastically embraced by the Tradr tribe."

"With these next five ETFs, we expect the appetite to be equally as sizeable given four of them provide leverage on stocks tied to the massive AI compute opportunity. In particular, given that CoreWeave has been the 21st most actively traded stock in the U.S. since its IPO, we believe there is a huge amount of pent-up demand for a leveraged ETF on this AI hyperscaler." Markiewicz added, "We're also thrilled about providing leverage on AST SpaceMobile, a company that has created a unique competitive global moat with its low Earth orbit satellite network."

The latest five listings follow the June debut of four other leveraged single-stock ETFs: **ARCX**, **UPSX**, **QUBX** and **RGU**, respectively covering Archer Aviation (NYSE: ACHR), Upstart Holdings (Nasdaq: UPST), Quantum Computing Inc. (Nasdaq: QUBT), and Rigetti Computing (Nasdaq: RGTI). In 2022, Tradr ETFs became the first issuer to launch leveraged ETFs on single stocks, starting with **TSLQ** for Tesla and **NVDS** for Nvidia.

Tradr's leveraged ETFs can be traded through most brokerage platforms and allow investors to avoid the hassle of using margin and the complexity of options trading. With this launch, Tradr's lineup grows to 19 leveraged ETFs. The firm continues its mission of providing sophisticated investors with innovative trading tools that enhance their ability to express market views with precision and efficiency.

About Tradr ETFs

Tradr ETFs are designed for sophisticated investors and professional traders who are looking to express high conviction investment views. The strategies include leveraged and inverse ETFs that seek short or long exposure to actively traded stocks and ETFs.

IMPORTANT RISK INFORMATION

Tradr ETFs are for sophisticated investors and professional traders with high conviction views and are very different from most other ETFs. The Funds are intended to be used as short-term trading vehicles and pursue leveraged investment objectives, which means they are riskier than alternatives that do not use leverage because the Funds magnify the performance of their underlying security. The volatility of the underlying security may affect a Fund's return as much as, or more than, the return of the underlying security.

Investors in the fund should: (a) understand the risks associated with the use of leverage; (b) understand the consequences of seeking inverse and leveraged investment results; (c) for short ETFs, understand the risk of shorting; (d) intend to actively monitor and manage their investment. Fund performance will likely be significantly different than the benchmark over periods longer than the specified reset period and the performance may trend in the opposite direction than its benchmark over periods other than that period.

Leverage increases the risk of a total loss of an investor's investment, may increase the volatility of the Funds, and may magnify any differences between the performance of the Funds and their reference security. The Funds seek leveraged investment results for a specific period (daily, monthly or quarterly). The exact exposure of an investment in the Fund intra-period will depend upon the movement of the reference security from the end of the prior period until the time of investment by the investor.

The Fund will not attempt to position its portfolio to ensure it does not gain or lose more than a maximum percentage of its net asset value on a given trading day. As a consequence, investors in a Fund that seeks two times daily performance would lose all of their money if the Fund's underlying security moves more than 50% in a direction adverse to the Fund on a given trading day.

ETFs involve risk including possible loss of the full principal value. There is no assurance that the Fund will achieve its investment objective. Principal risks and other important risks may be found in the prospectus. Past performance does not guarantee future results.

ETF shares are bought and sold at market price (not NAV) and are not individually redeemed from the ETF. There can be no guarantee that an active trading market for ETF shares will develop or be maintained, or that their listing will continue or remain unchanged. Buying or selling ETF shares on an exchange may require the payment of brokerage commissions and frequent trading may incur brokerage costs that detract significantly from investment returns.

Investors should carefully consider the investment objectives, risks, charges and expenses of the Funds. This and other important information about the Fund is contained in the Prospectus, which can be obtained by visiting www.tradretfs.com. The Prospectus should be read carefully before investing.
